

## LOGGER. Java

```
package week5Project;

public interface Logger {

    public void log(String log);
    public void error(String error);

}
```

## AsteriskLogger.java

```
package week5Project;

public class AsteriskLogger implements Logger{

    public static void main(String[] args) {

    }

    @Override
    public void log(String log) {
        System.out.println("***" + log + "***");
    }

    @Override
    public void error(String error) {
        System.out.println("***" + "Error:" + "Hello" + "***");
    }

}
```

## SpacedLogger.java

```
package InterfaceLogger;

public class SpacedLogger implements Logger {

    public static void main(String[] args) {

    }

    @Override
    public void log(String log) {
        // TODO Auto-generated method stub
    }

    @Override
    public void error(String error) {
```

```
        // TODO Auto-generated method stub

    }

}

Application.java

package week5Project;

public class Application {

    public static void main(String[] args) {
        Logger logger = new AsteriskLogger();

        logger.log("Hello");
        logger.error("ERROR");

    }

}
```
